B.A. Sociology Honours | Semester 6 | SOC6CJ304

Sociology of Development

Course Code: SOC6CJ304 • Module 3 Notes

Module 3: INEQUALITY AND INTERNATIONAL SCENARIO

Course: SOC6CJ304 – Sociology of Development • **University of Calicut (CUFYUGP 2024)**

1. Conceptual Scope, Epistemic Frameworks & Curricular Foundations

The academic investigation of **Sociology of Development**, specifically regarding Module 3 (INEQUALITY AND INTERNATIONAL SCENARIO), is anchored within the rigorous undergraduate curriculum of Calicut University under the CUFYUGP 2024 regulations. This module is structured around core thematic units designed to provide learners with both theoretical mastery and critical empirical awareness.

In contemporary sociological scholarship, society is understood not as a static aggregate of detached individuals, but as an emergent, dynamically organized matrix of structured relations, institutionalized practices, and cultural meanings. C. Wright Mills famously articulated that the primary purpose of the sociological imagination is to comprehend the intricate connections between individual biographies and macroscopic historical structures. Throughout this module, learners examine how institutional arrangements reproduce order, manage social contradictions, and condition individual agency.

2. Systematic Sociological Examination of Developed, Developing and Underdeveloped Nations

The scholarly examination of **Developed, Developing and Underdeveloped Nations** constitutes an indispensable analytical domain within *Sociology of Development*. In sociological epistemology, social phenomena are neither arbitrary behavioral aggregates nor biologically predetermined necessities; rather, they represent emergent structural configurations shaped by historical trajectories, institutional mechanisms, power relations, and normative consensus.

When interrogating developed, developing and underdeveloped nations, sociologists examine the dynamic interplay between microscopic individual agency and macroscopic structural constraints. Every social institution or practice operates through established networks of socialization, sanctions, and structural incentives that reproduce stability while generating internal contradictions that drive progressive social transformation.

2.1. Theoretical Paradigms and Epistemological Frameworks

Contemporary sociological literature concerning developed, developing and underdeveloped nations is characterized by profound theoretical plurality. The structural-functionalist tradition—derived from Emile Durkheim, Talcott Parsons, and Robert K. Merton—interrogates this domain through functional prerequisites, institutional integration, and equilibrium maintenance, distinguishing between manifest objectives and latent structural consequences.

Conversely, critical conflict paradigms and Marxist traditions—elaborated by Karl Marx, Antonio Gramsci, and contemporary critical theorists—unmask how institutional arrangements surrounding developed, developing and underdeveloped nations reflect underlying relations of production, class exploitation, and ideological hegemony. Furthermore, feminist and subaltern perspectives illuminate how patriarchal structures, graded caste inequalities, and colonial legacies intersect to marginalise subordinate social groups within these institutional networks.

DegreeLive

2.2. Institutional Mechanics and Empirical Realities

From an empirical perspective, the operational mechanics of developed, developing and underdeveloped nations must be examined within concrete socio-historical contexts. In developing societies and particularly in the complex social matrix of contemporary India, modern statutory laws, market forces, and constitutional values coexist alongside enduring traditional hierarchies of caste, kinship endogamy, and community networks.

Empirical field studies emphasize that social transformation is neither linear nor uniform. While urbanization, digital technology, democratic decentralization, and state welfare policies create new avenues for upward social mobility and civic participation, traditional elites often adapt, maintaining institutional control through informal patronage networks and economic monopolies. Understanding developed, developing and underdeveloped nations therefore requires rigorous empirical methodologies that combine quantitative demographic surveys with in-depth qualitative field ethnography.

2.3. Contemporary Policy Debates and Regional Applications

Within the context of Keralam and the wider Indian subcontinent, the practical implications of developed, developing and underdeveloped nations are directly manifested in contemporary policy interventions and grassroots mobilizations. Historical social reforms—notably the Kerala Renaissance (*Navodhanam*) movements, tenancy land reforms, and the devolution of planning authority to Panchayati Raj institutions—demonstrate how organized collective action can dismantle entrenched institutional privileges.

However, modern society faces complex second-generation challenges, including demographic aging, youth employment precarity, environmental vulnerabilities, and the integration of diverse social communities. Addressing these challenges requires nuanced sociological literacy, evidence-based policy design, and an unwavering commitment to social justice, constitutional equity, and inclusive human development.

3. Systematic Sociological Examination of Colonialism, Imperialism

The scholarly examination of **Colonialism, Imperialism** constitutes an indispensable analytical domain within *Sociology of Development*. In sociological epistemology, social phenomena are neither arbitrary behavioral aggregates nor biologically predetermined necessities; rather, they represent emergent structural configurations shaped by historical trajectories, institutional mechanisms, power relations, and normative consensus.

When interrogating colonialism, imperialism, sociologists examine the dynamic interplay between microscopic individual agency and macroscopic structural constraints. Every social institution or practice operates through established networks of socialization, sanctions, and structural incentives that reproduce stability while generating internal contradictions that drive progressive social transformation.

3.1. Theoretical Paradigms and Epistemological Frameworks

Contemporary sociological literature concerning colonialism, imperialism is characterized by profound theoretical plurality. The structural-functionalist tradition—derived from Emile Durkheim, Talcott Parsons, and Robert K. Merton—interrogates this domain through functional prerequisites, institutional integration, and equilibrium maintenance, distinguishing between manifest objectives and latent structural consequences.

Conversely, critical conflict paradigms and Marxist traditions—elaborated by Karl Marx, Antonio Gramsci, and contemporary critical theorists—unmask how institutional arrangements surrounding colonialism, imperialism reflect underlying relations of production, class exploitation, and ideological hegemony.

Furthermore, feminist and subaltern perspectives illuminate how patriarchal structures, graded caste inequalities, and colonial legacies intersect to marginalise subordinate social groups within these institutional networks.

3.2. Institutional Mechanics and Empirical Realities

From an empirical perspective, the operational mechanics of colonialism, imperialism must be examined within concrete socio-historical contexts. In developing societies and particularly in the complex social matrix of contemporary India, modern statutory laws, market forces, and constitutional values coexist alongside enduring traditional hierarchies of caste, kinship endogamy, and community networks.

Empirical field studies emphasize that social transformation is neither linear nor uniform. While urbanization, digital technology, democratic decentralization, and state welfare policies create new avenues for upward social mobility and civic participation, traditional elites often adapt, maintaining institutional control through informal patronage networks and economic monopolies. Understanding colonialism, imperialism therefore requires rigorous empirical methodologies that combine quantitative demographic surveys with in-depth qualitative field ethnography.

3.3. Contemporary Policy Debates and Regional Applications

Within the context of Keralam and the wider Indian subcontinent, the practical implications of colonialism, imperialism are directly manifested in contemporary policy interventions and grassroots mobilizations. Historical social reforms—notably the Kerala Renaissance (*Navodhanam*) movements, tenancy land reforms, and the devolution of planning authority to Panchayati Raj institutions—demonstrate how organized collective action can dismantle entrenched institutional privileges.

However, modern society faces complex second-generation challenges, including demographic aging, youth employment precarity, environmental vulnerabilities, and the integration of diverse social communities. Addressing these challenges requires nuanced sociological literacy, evidence-based policy design, and an unwavering commitment to social justice, constitutional equity, and inclusive human development.

4. Systematic Sociological Examination of Colonialism and emergence of World Capitalism

The scholarly examination of **Colonialism and emergence of World Capitalism** constitutes an indispensable analytical domain within *Sociology of Development*. In sociological epistemology, social phenomena are neither arbitrary behavioral aggregates nor biologically predetermined necessities; rather, they represent emergent structural configurations shaped by historical trajectories, institutional mechanisms, power relations, and normative consensus.

When interrogating colonialism and emergence of world capitalism, sociologists examine the dynamic interplay between microscopic individual agency and macroscopic structural constraints. Every social institution or practice operates through established networks of socialization, sanctions, and structural incentives that reproduce stability while generating internal contradictions that drive progressive social transformation.

4.1. Theoretical Paradigms and Epistemological Frameworks

Contemporary sociological literature concerning colonialism and emergence of world capitalism is characterized by profound theoretical plurality. The structural-functionalist tradition—derived from Emile Durkheim, Talcott Parsons, and Robert K. Merton—interrogates this domain through functional

prerequisites, institutional integration, and equilibrium maintenance, distinguishing between manifest objectives and latent structural consequences.

Conversely, critical conflict paradigms and Marxist traditions—elaborated by Karl Marx, Antonio Gramsci, and contemporary critical theorists—unmask how institutional arrangements surrounding colonialism and emergence of world capitalism reflect underlying relations of production, class exploitation, and ideological hegemony. Furthermore, feminist and subaltern perspectives illuminate how patriarchal structures, graded caste inequalities, and colonial legacies intersect to marginalise subordinate social groups within these institutional networks.

4.2. Institutional Mechanics and Empirical Realities

From an empirical perspective, the operational mechanics of colonialism and emergence of world capitalism must be examined within concrete socio-historical contexts. In developing societies and particularly in the complex social matrix of contemporary India, modern statutory laws, market forces, and constitutional values coexist alongside enduring traditional hierarchies of caste, kinship endogamy, and community networks.

Empirical field studies emphasize that social transformation is neither linear nor uniform. While urbanization, digital technology, democratic decentralization, and state welfare policies create new avenues for upward social mobility and civic participation, traditional elites often adapt, maintaining institutional control through informal patronage networks and economic monopolies. Understanding colonialism and emergence of world capitalism therefore requires rigorous empirical methodologies that combine quantitative demographic surveys with in-depth qualitative field ethnography.

4.3. Contemporary Policy Debates and Regional Applications

Within the context of Keralam and the wider Indian subcontinent, the practical implications of colonialism and emergence of world capitalism are directly manifested in contemporary policy interventions and grassroots mobilizations. Historical social reforms—notably the Kerala Renaissance (*Navodhanam*) movements, tenancy land reforms, and the devolution of planning authority to Panchayati Raj institutions—demonstrate how organized collective action can dismantle entrenched institutional privileges.

However, modern society faces complex second-generation challenges, including demographic aging, youth employment precarity, environmental vulnerabilities, and the integration of diverse social communities. Addressing these challenges requires nuanced sociological literacy, evidence-based policy design, and an unwavering commitment to social justice, constitutional equity, and inclusive human development.

5. Systematic Sociological Examination of Neo-colonialism

The scholarly examination of **Neo-colonialism** constitutes an indispensable analytical domain within *Sociology of Development*. In sociological epistemology, social phenomena are neither arbitrary behavioral aggregates nor biologically predetermined necessities; rather, they represent emergent structural configurations shaped by historical trajectories, institutional mechanisms, power relations, and normative consensus.

When interrogating neo-colonialism, sociologists examine the dynamic interplay between microscopic individual agency and macroscopic structural constraints. Every social institution or practice operates through established networks of socialization, sanctions, and structural incentives that reproduce stability while generating internal contradictions that drive progressive social transformation.

5.1. Theoretical Paradigms and Epistemological Frameworks

Contemporary sociological literature concerning neo-colonialism is characterized by profound theoretical plurality. The structural-functionalist tradition—derived from Emile Durkheim, Talcott Parsons, and Robert K. Merton—interrogates this domain through functional prerequisites, institutional integration, and equilibrium maintenance, distinguishing between manifest objectives and latent structural consequences.

Conversely, critical conflict paradigms and Marxist traditions—elaborated by Karl Marx, Antonio Gramsci, and contemporary critical theorists—unmask how institutional arrangements surrounding neo-colonialism reflect underlying relations of production, class exploitation, and ideological hegemony. Furthermore, feminist and subaltern perspectives illuminate how patriarchal structures, graded caste inequalities, and colonial legacies intersect to marginalise subordinate social groups within these institutional networks.

5.2. Institutional Mechanics and Empirical Realities

From an empirical perspective, the operational mechanics of neo-colonialism must be examined within concrete socio-historical contexts. In developing societies and particularly in the complex social matrix of contemporary India, modern statutory laws, market forces, and constitutional values coexist alongside enduring traditional hierarchies of caste, kinship endogamy, and community networks.

Empirical field studies emphasize that social transformation is neither linear nor uniform. While urbanization, digital technology, democratic decentralization, and state welfare policies create new avenues for upward social mobility and civic participation, traditional elites often adapt, maintaining institutional control through informal patronage networks and economic monopolies. Understanding neo-colonialism therefore requires rigorous empirical methodologies that combine quantitative demographic surveys with in-depth qualitative field ethnography.

5.3. Contemporary Policy Debates and Regional Applications

Within the context of Keralam and the wider Indian subcontinent, the practical implications of neo-colonialism are directly manifested in contemporary policy interventions and grassroots mobilizations. Historical social reforms—notably the Kerala Renaissance (*Navodhanam*) movements, tenancy land reforms, and the devolution of planning authority to Panchayati Raj institutions—demonstrate how organized collective action can dismantle entrenched institutional privileges.

However, modern society faces complex second-generation challenges, including demographic aging, youth employment precarity, environmental vulnerabilities, and the integration of diverse social communities. Addressing these challenges requires nuanced sociological literacy, evidence-based policy design, and an unwavering commitment to social justice, constitutional equity, and inclusive human development.

6. Systematic Sociological Examination of Technocapitalism, Surveillance Capitalism

The scholarly examination of **Technocapitalism, Surveillance Capitalism** constitutes an indispensable analytical domain within *Sociology of Development*. In sociological epistemology, social phenomena are neither arbitrary behavioral aggregates nor biologically predetermined necessities; rather, they represent emergent structural configurations shaped by historical trajectories, institutional mechanisms, power relations, and normative consensus.

When interrogating technocapitalism, surveillance capitalism, sociologists examine the dynamic interplay between microscopic individual agency and macroscopic structural constraints. Every social institution or practice operates through established networks of socialization, sanctions, and structural incentives that

Degreelive

reproduce stability while generating internal contradictions that drive progressive social transformation.

6.1. Theoretical Paradigms and Epistemological Frameworks

Contemporary sociological literature concerning technocapitalism, surveillance capitalism is characterized by profound theoretical plurality. The structural-functionalist tradition—derived from Emile Durkheim, Talcott Parsons, and Robert K. Merton—interrogates this domain through functional prerequisites, institutional integration, and equilibrium maintenance, distinguishing between manifest objectives and latent structural consequences.

Conversely, critical conflict paradigms and Marxist traditions—elaborated by Karl Marx, Antonio Gramsci, and contemporary critical theorists—unmask how institutional arrangements surrounding technocapitalism, surveillance capitalism reflect underlying relations of production, class exploitation, and ideological hegemony. Furthermore, feminist and subaltern perspectives illuminate how patriarchal structures, graded caste inequalities, and colonial legacies intersect to marginalise subordinate social groups within these institutional networks.

6.2. Institutional Mechanics and Empirical Realities

From an empirical perspective, the operational mechanics of technocapitalism, surveillance capitalism must be examined within concrete socio-historical contexts. In developing societies and particularly in the complex social matrix of contemporary India, modern statutory laws, market forces, and constitutional values coexist alongside enduring traditional hierarchies of caste, kinship endogamy, and community networks.

Empirical field studies emphasize that social transformation is neither linear nor uniform. While urbanization, digital technology, democratic decentralization, and state welfare policies create new avenues for upward social mobility and civic participation, traditional elites often adapt, maintaining institutional control through informal patronage networks and economic monopolies. Understanding technocapitalism, surveillance capitalism therefore requires rigorous empirical methodologies that combine quantitative demographic surveys with in-depth qualitative field ethnography.

6.3. Contemporary Policy Debates and Regional Applications

Within the context of Keralam and the wider Indian subcontinent, the practical implications of technocapitalism, surveillance capitalism are directly manifested in contemporary policy interventions and grassroots mobilizations. Historical social reforms—notably the Kerala Renaissance (*Navodhanam*) movements, tenancy land reforms, and the devolution of planning authority to Panchayati Raj institutions—demonstrate how organized collective action can dismantle entrenched institutional privileges.

However, modern society faces complex second-generation challenges, including demographic aging, youth employment precarity, environmental vulnerabilities, and the integration of diverse social communities. Addressing these challenges requires nuanced sociological literacy, evidence-based policy design, and an unwavering commitment to social justice, constitutional equity, and inclusive human development.

7. Systematic Sociological Examination of Techno feudalism

The scholarly examination of **Techno feudalism** constitutes an indispensable analytical domain within *Sociology of Development*. In sociological epistemology, social phenomena are neither arbitrary behavioral aggregates nor biologically predetermined necessities; rather, they represent emergent structural configurations shaped by historical trajectories, institutional mechanisms, power relations, and normative consensus.

When interrogating techno feudalism, sociologists examine the dynamic interplay between microscopic individual agency and macroscopic structural constraints. Every social institution or practice operates through established networks of socialization, sanctions, and structural incentives that reproduce stability while generating internal contradictions that drive progressive social transformation.

7.1. Theoretical Paradigms and Epistemological Frameworks

Contemporary sociological literature concerning techno feudalism is characterized by profound theoretical plurality. The structural-functionalist tradition—derived from Emile Durkheim, Talcott Parsons, and Robert K. Merton—interrogates this domain through functional prerequisites, institutional integration, and equilibrium maintenance, distinguishing between manifest objectives and latent structural consequences.

Conversely, critical conflict paradigms and Marxist traditions—elaborated by Karl Marx, Antonio Gramsci, and contemporary critical theorists—unmask how institutional arrangements surrounding techno feudalism reflect underlying relations of production, class exploitation, and ideological hegemony. Furthermore, feminist and subaltern perspectives illuminate how patriarchal structures, graded caste inequalities, and colonial legacies intersect to marginalise subordinate social groups within these institutional networks.

7.2. Institutional Mechanics and Empirical Realities

From an empirical perspective, the operational mechanics of techno feudalism must be examined within concrete socio-historical contexts. In developing societies and particularly in the complex social matrix of contemporary India, modern statutory laws, market forces, and constitutional values coexist alongside enduring traditional hierarchies of caste, kinship endogamy, and community networks.

Empirical field studies emphasize that social transformation is neither linear nor uniform. 8.3. Contemporary Policy Debates and Regional Applications

Within the context of Keralam and the wider Indian subcontinent, the practical implications of role of wto, world bank, imf and corporate and media houses rodrik, d. (2011). the globalization paradox: democracy and the future of the world economy. w. w. norton & company. amin, s. (1974). accumulation on a world scale: a critique of the theory of underdevelopment. monthly review press. hobsbawm, e. j. (1999). the age of capital: 1848-1875. vintage. fanon, f. (1963). the wretched of the earth. grove press. harvey, d. (2005). a brief history of neoliberalism are directly manifested in contemporary policy interventions and grassroots mobilizations. Historical social reforms—notably the Kerala Renaissance (*Navodhanam*) movements, tenancy land reforms, and the devolution of planning authority to Panchayati Raj institutions—demonstrate how organized collective action can dismantle entrenched institutional privileges.

However, modern society faces complex second-generation challenges, including demographic aging, youth employment precarity, environmental vulnerabilities, and the integration of diverse social communities. Addressing these challenges requires nuanced sociological literacy, evidence-based policy design, and an unwavering commitment to social justice, constitutional equity, and inclusive human development.

3. Classical & Modern Sociological Epistemologies: Structural Dynamics of INEQUALITY AND INTERNATIONAL SCENARIO

The systematic academic investigation of **INEQUALITY AND INTERNATIONAL SCENARIO** within the discipline of sociology requires an interrogation of foundational theoretical paradigms. Classical sociological thought—anchored in the foundational works of Auguste Comte, Karl Marx, Emile Durkheim, and Max Weber—established divergent epistemological trajectories for examining social reality. In analyzing developed, developing and underdeveloped nations, structural-functionalist approaches emphasize the systemic equilibrium, functional prerequisites, and integration mechanisms that preserve social continuity across generations.

Conversely, critical and dialectical traditions analyze how developed, developing and underdeveloped nations serves as an arena of structural contestation, ideological reproduction, and differential access to material resources. Under historical materialism, institutional configurations cannot be analyzed in isolation from the

prevailing relations of production and class antagonisms. Applying this critical perspective illuminates how historical transformations reshape normative expectations, occupational hierarchies, and the distribution of social status.

Sociological Paradigm	Core Analytical Lens	Primary Theoretical Focus	Application to INEQUALITY AND INTERNATI
Structural Functionalism	Equilibrium & Functional Adaptation	Normative consensus, role differentiation, integration	Interprets systemic continuity and institutional stability.
Conflict & Critical Theory	Structural Inequality & Hegemony	Power asymmetries, resource monopolies, ideological dominance	Unmasks exploitation, marginalisation, and institutional control.
Symbolic Interactionism	Intersubjective Meaning & Agency	Micro-level interactions, definition of the situation, symbols	Examines how actors negotiate roles and construct identity.
Post-Structural / Subaltern	Discourse, Power & Marginality	Deconstruction of hegemony, localized resistances, standpoint	Highlights silenced narratives and localized social movements.

Furthermore, interpretative sociology, pioneered by Max Weber's concept of *Verstehen* (empathic understanding) and later elaborated by symbolic interactionists like George Herbert Mead and Erving Goffman, highlights the centrality of subjective meaning in social action. Applying this interpretive framework to colonialism, imperialism demonstrates that social actors are neither passive cultural automatons nor wholly detached rational decision-makers; rather, they continually negotiate, construct, and modify institutional realities through everyday social interactions and communicative rituals.

4. Institutional Mechanics, Empirical Fieldwork & Indian Sociological Realities

Within the context of contemporary Indian society, the analysis of **INEQUALITY AND INTERNATIONAL SCENARIO** takes on profound empirical complexity. Indian sociological scholarship—pioneered by thinkers such as G.S. Ghurye, M.N. Srinivas, Irawati Karve, A.R. Desai, and B.R. Ambedkar—demonstrates that Western theoretical models must be critically re-examined when confronted with the unique intersection of caste, class, gender, community, and region in South Asia.

When interrogating **Colonialism, Imperialism**, researchers encounter the dual realities of continuity and change. While constitutional democracy, urbanization, industrial development, and legal reforms have modernized public institutions, primordial structures like caste hierarchies, endogamous marriage practices, and patriarchal kinship networks persist in redefined forms. M.N. Srinivas's seminal concepts of *Sanskritization* and the *Dominant Caste*, alongside A.R. Desai's political-economic critiques of agrarian capitalism, provide indispensable frameworks for understanding these contemporary contradictions.

In empirical sociological research, methodological rigor demands a careful synthesis of quantitative surveys and qualitative ethnography. Whether assessing social stratification, educational attainment, occupational mobility, or community welfare interventions, scholars must account for structural exclusions. As Dr. B.R. Ambedkar emphatically demonstrated, the caste system is not merely a division of labour, but a hierarchical

division of labourers based on graded inequality. In the context of colonialism and emergence of world capitalism, understanding these deep-seated structural barriers is essential for designing effective social welfare policies and affirmative action programs.
